

BODYSCULPT

NUTRITION LESSON 2

CALORIES.

What they are, and how they change your body.

A UNIT OF ENERGY.

Calories are the energy in food and drink. Your body uses that energy to breathe, think, move and train.

For the science fans: one calorie on a food label is the energy needed to heat 1 litre of water by 1°C.

A CALORIE IS A CALORIE

A chicken breast and an avocado have different calories, and your body uses them differently. But a calorie is still a unit of energy. It doesn't need to be any harder than that.

WHERE THEY COME FROM.

Every gram of food gives you calories. Some give you a lot more than others.

PROTEIN 4 per gram

CARBS 4 per gram

FAT 9 per gram

ALCOHOL 7 per gram

WHY THIS MATTERS

Fat has more than double the calories of protein or carbs. That's why a small handful of nuts or a bowl of granola can have more calories than you'd think. And drinks count: the wine or beer you don't track at the weekend adds up.

CALORIES IN V CALORIES OUT.

This is why we track your food. **In** is what you eat and drink. **Out** is what your body burns. Compare the two:

EAT THE SAME AS YOU BURN

MAINTENANCE

= Weight stays the same

EAT LESS THAN YOU BURN

DEFICIT

↓ Weight goes down. Mostly fat, with our training

EAT MORE THAN YOU BURN

SURPLUS

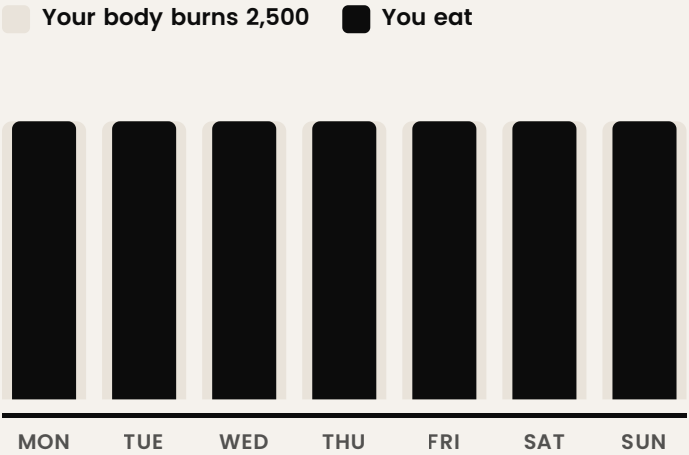

↑ Weight goes up. Some can be muscle, with the right training

1 OF 3 · STAY THE SAME

MAINTENANCE.

Eat the same as you burn and your weight stays steady. Say your body burns 2,500 calories a day, and you eat 2,500.

YOUR BODY BURNS
17,500 a week

YOU EAT
17,500 a week

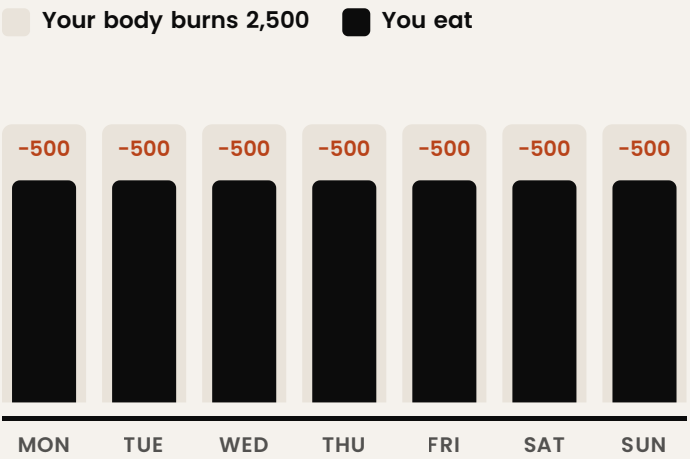

THE RESULT

Calories in match calories out. Your weight stays the same.

2 OF 3 · LOSE FAT

CALORIE DEFICIT.

Eat less than you burn. Same person, but now she eats 2,000 a day. That's 500 less than her body needs.

LESS EACH WEEK
3,500 calories

ROUGHLY EQUALS
1 lb of fat

THE RESULT

About a pound of fat lost a week. 3,500 calories is roughly 1 lb of body fat. It's a rough guide, not exact.

EVERY DIET WORKS THE SAME WAY.

Tried lots of diets? The ones that worked all did one thing. They made you eat fewer calories.

ATKINS
Cuts carbs
DEFICIT

INTERMITTENT FASTING
Short eating window
DEFICIT

5:2 DIET
Two days of barely eating
DEFICIT

KETO
No carbs at all
DEFICIT

PALEO
No processed food
DEFICIT

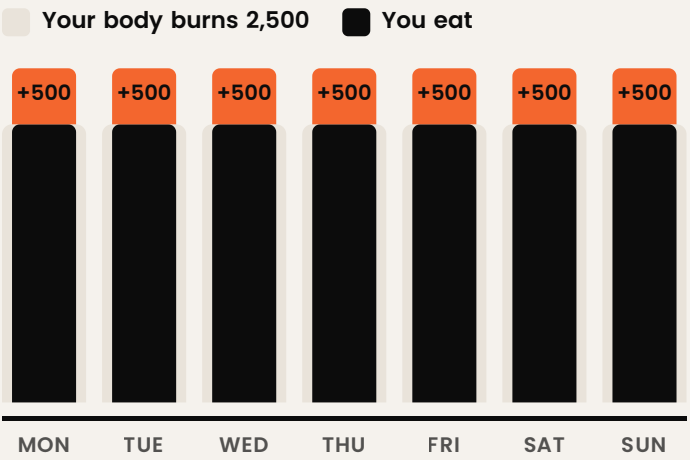

SLIMMING WORLD
Points control how much you eat
DEFICIT

There's no magic. Our way gets you the same deficit with no banned foods. You eat food you like and track it.

3 OF 3 · MORE IN THAN OUT

CALORIE SURPLUS.

Eat more than you burn and you gain weight. Here she eats 3,000 a day, 500 more than she needs.

EXTRA EACH WEEK
3,500 calories

ROUGHLY EQUALS
1 lb gained

TWO WAYS THIS HAPPENS

By accident: eating too much and gaining body fat. **On purpose:** a small surplus with the right training, to build muscle.

THREE WAYS TO MAKE A DEFICIT.

EAT A BIT LESS

Lower how much you eat, like on the chart before.

MOVE MORE

More steps and more activity in your day. We cover this in the next lesson.

BOTH MOST COMMON

Eat a bit less and move a bit more. You get to eat more food and still lose fat.

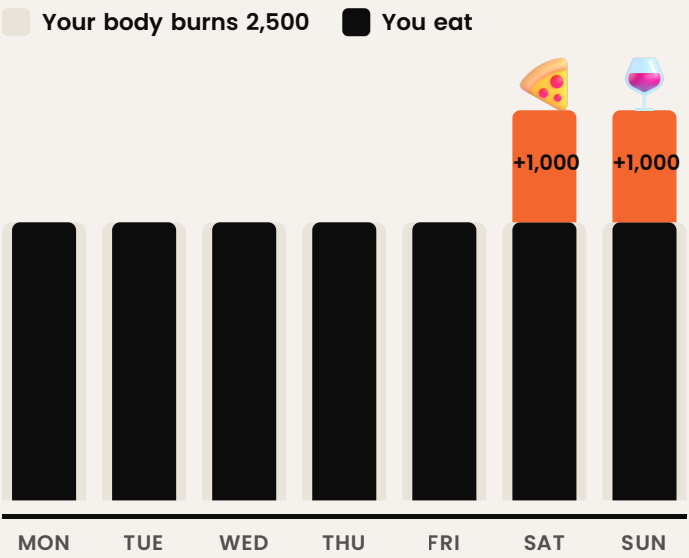

SMALL AND STEADY

You don't need to starve. Around 500 calories a day less than you burn is enough to lose about a pound a week.

THE MOST COMMON TRAP

THE WEEKEND.

Good all week, then takeaways and drinks on Saturday and Sunday. Each weekend day goes 1,000 over.

MON TO FRI
Spot on

OVER THE WEEK
2,000 extra

WEEKENDS COUNT TOO

Two big days can wipe out a whole week of good work, and slowly add body fat. Track Saturday and Sunday like any other day.

REMEMBER THIS.

1 A CALORIE IS A UNIT OF ENERGY

Fat and alcohol have the most per gram.

2 EAT LESS THAN YOU BURN TO LOSE FAT

Every diet that works does this.

3 TRACK EVERY DAY, WEEKENDS TOO

Get as close to your target as you can.

Any questions? Ask one of the coaches in the gym, or post in the members group on Facebook. We'd love to help.
