BODYSCULPT

YOUR MYFITNESSPAL GUIDE.

Set it up once, then log your food in seconds. The free version is all you need.

START HERE

TRACKING IS EASY.

You set MyFitnessPal up once. After that, it's three things.

1 SCAN IT

Scan the barcode on what you're eating.

2 WEIGH IT

Tell the app how much you had. Grams is best.

3 LOG IT

Do it as you go and it takes seconds.

That's tracking. It doesn't need to be perfect, it just needs to be honest. Everything after Step 3 in this guide is a bonus.

STEP 1

GET SET UP.

1. Download **MyFitnessPal** from the App Store (iPhone) or Google Play (Samsung and Android).
2. Open it and tap **Sign up**. Use your email, Apple or Facebook.
3. It'll ask about your goal, activity, age, height and weight. Answer them, but don't worry about the calories it suggests. You'll swap them for ours next.

PREMIUM?

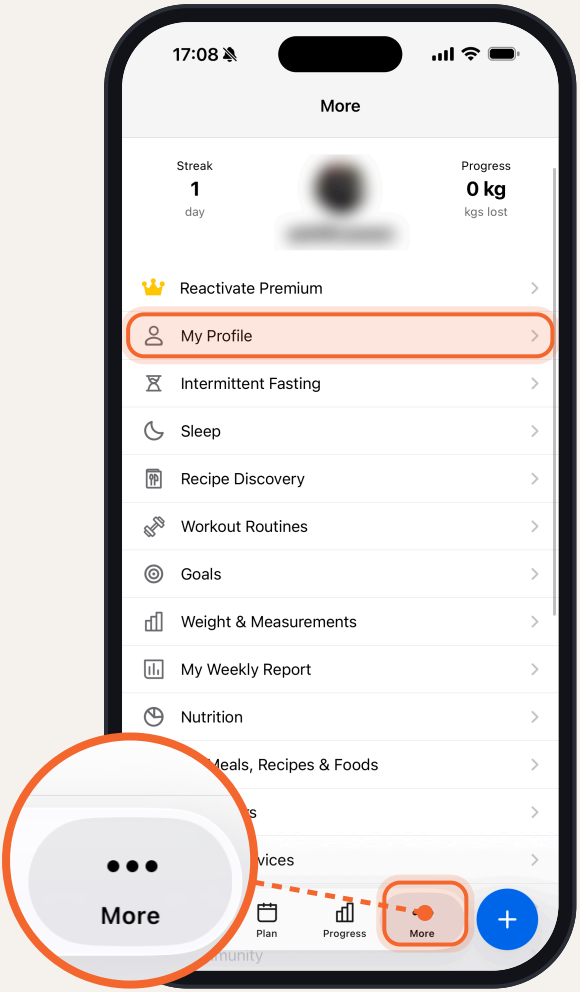

MyFitnessPal will offer you a free trial of Premium.

You don't need it. Everything in this guide works on the free version.

STEP 1

SET YOUR UNITS.

Tap **More**, then **My Profile**, **Edit Profile** and **Units**, so you see stone, kg, cm or whatever you're used to.

STEP 2

YOUR CALORIE TARGET.

The app will give you its own target. Ignore it.

USE OURS.

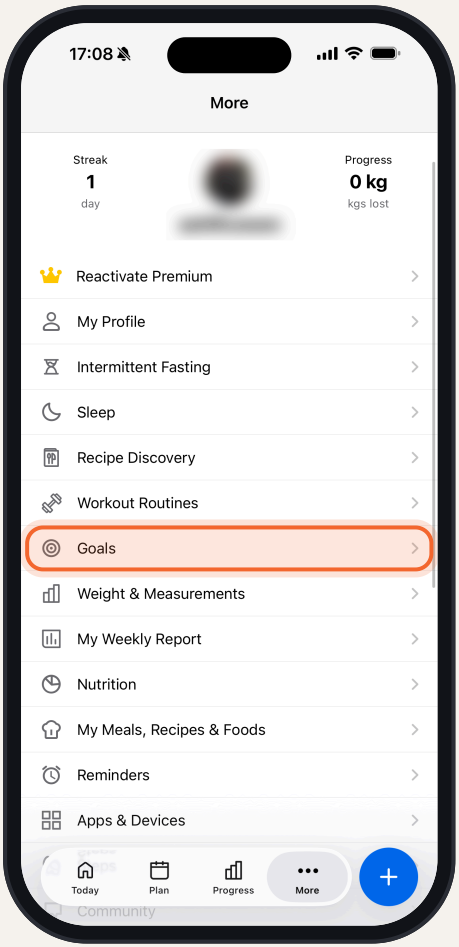

We've set your calorie and protein targets for you. They're on the **Nutrition tab** in the **Trainerize app**. Have them in front of you for the next few steps.

STEP 2

YOUR GOALS.

Open the **Nutrition tab** in Trainerize so your targets from us are ready. Then:

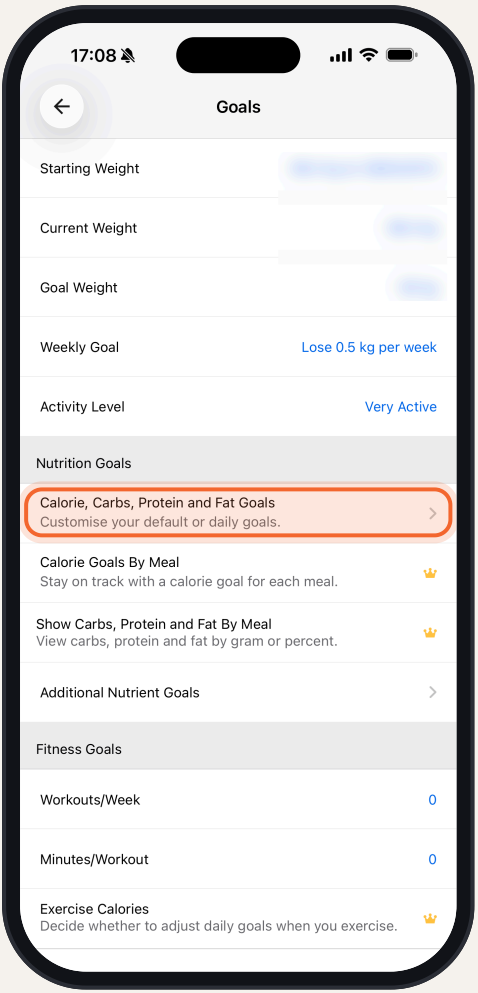

1 Tap **More**, then **Goals**.

STEP 2

CALORIE GOALS.

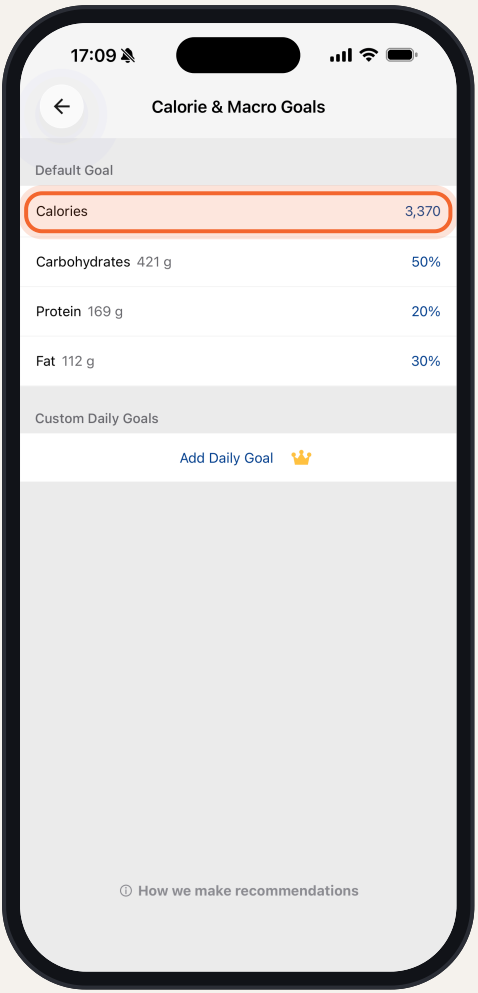

2 Tap **Calorie, Carbs, Protein and Fat Goals**.

STEP 2

YOUR CALORIES.

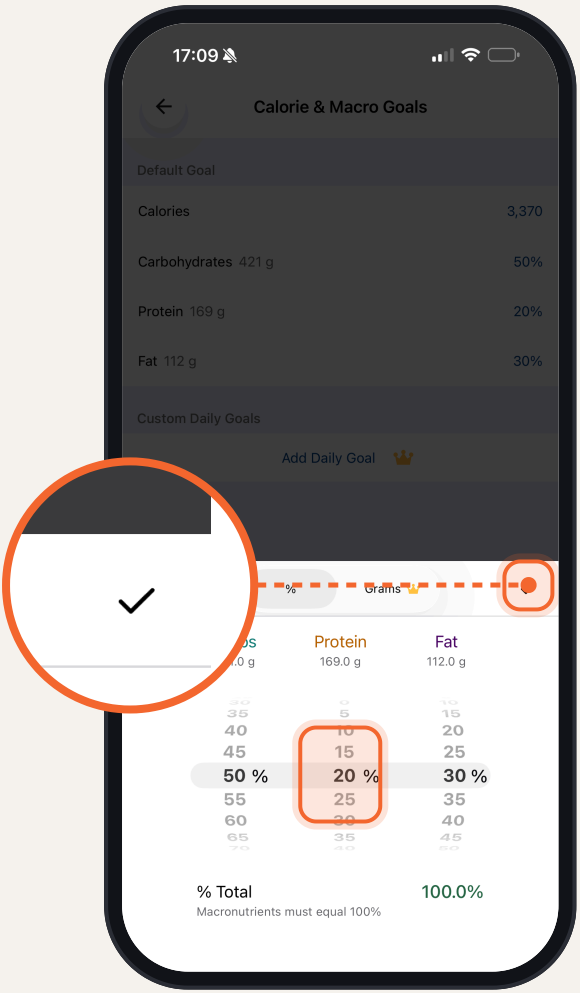

3 Tap **Calories**, type in your calorie target and save.

STEP 2

YOUR PROTEIN.

4 Tap **Protein** and set the percentage that gets you to your protein target from Trainerize. Adjust carbs and fat so it all adds up to 100%, then tap the tick.

STEP 2

LINKED A STEP COUNTER OR WATCH?

MyFitnessPal might add "exercise calories" to your day when you walk or train.

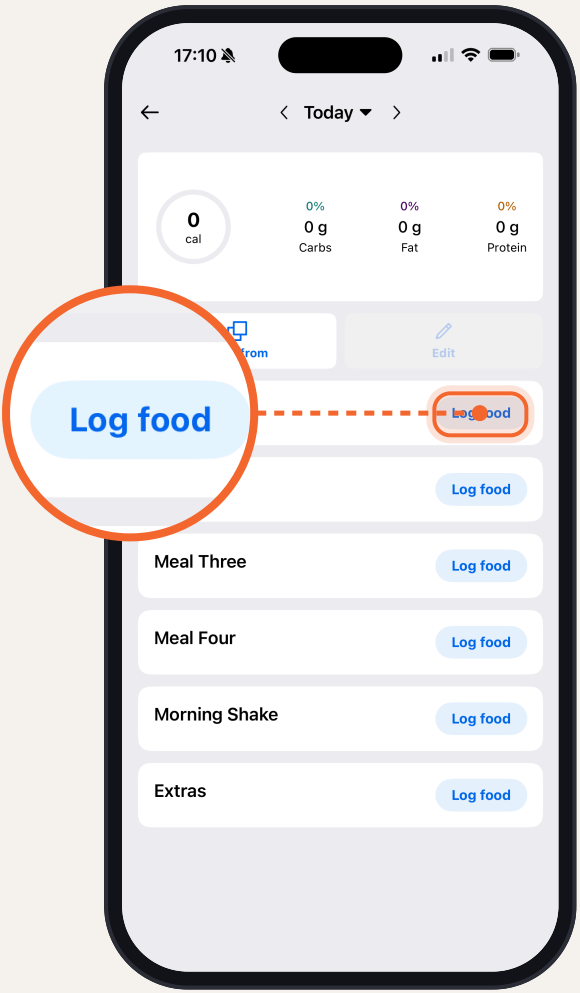

DON'T EAT THEM BACK.

Your target already allows for your steps and your sessions with us.

STEP 3

LOG YOUR FOOD.

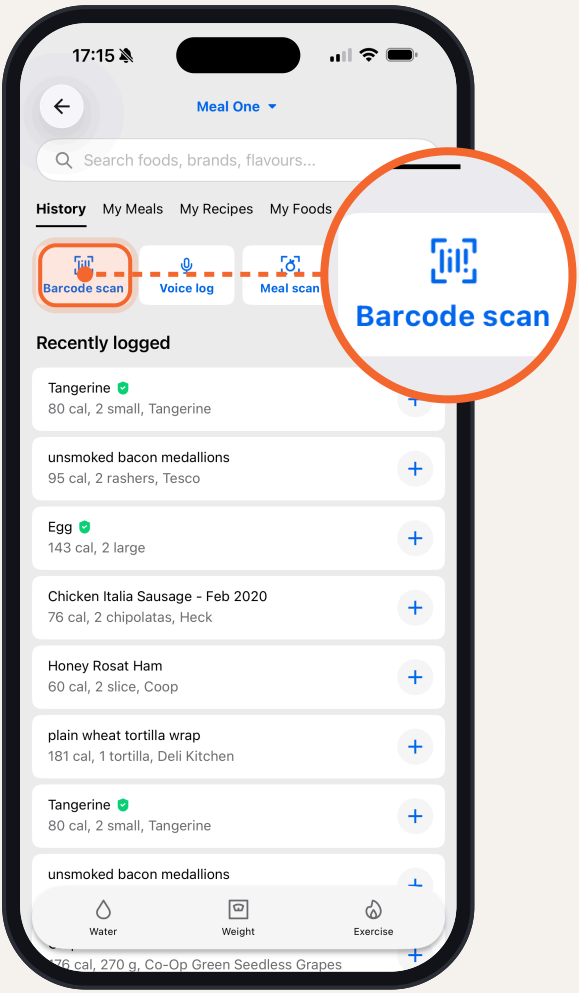

1 On **Today**, tap **Log food** next to the meal.

STEP 3

SCAN THE BARCODE.

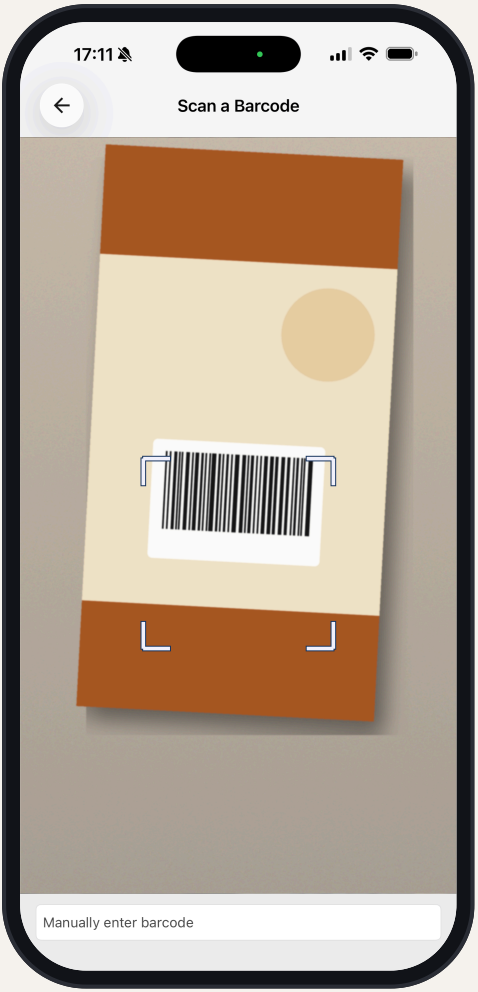

2 If it's got a barcode, tap **Barcode scan**. It's the quickest and most accurate way.

STEP 3

LINE IT UP.

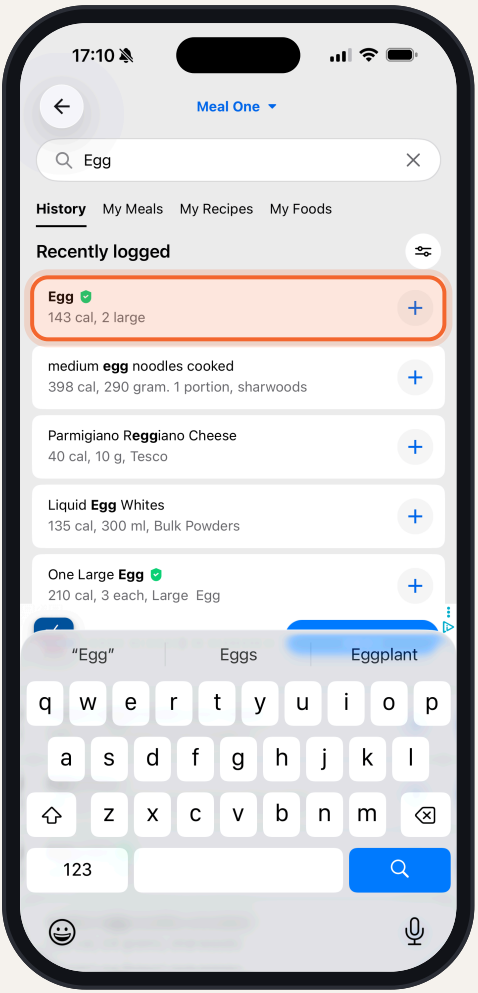

Hold the barcode inside the corners and it'll find the food for you.

STEP 3

OR SEARCH FOR IT.

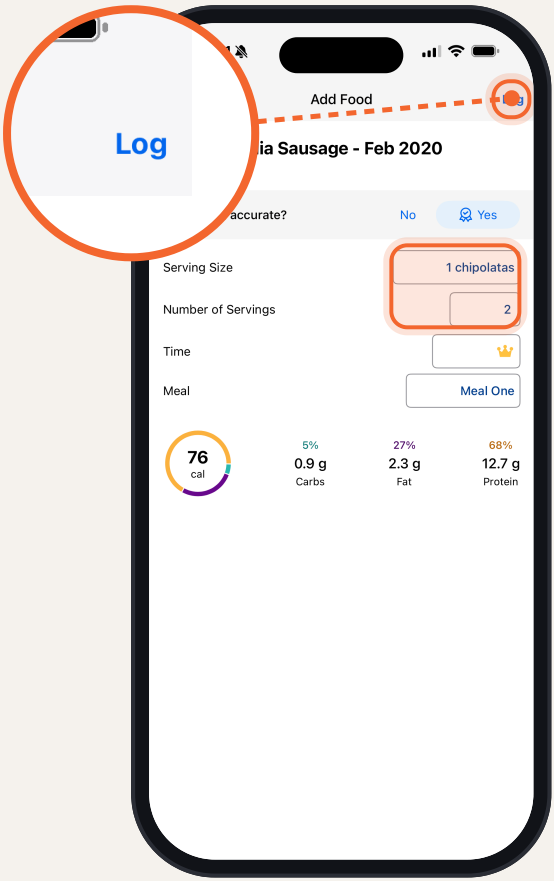

3 No barcode? **Search** for it. Be specific, and pick the result with the **green tick** if there is one. That means MyFitnessPal has checked it.

STEP 3

HOW MUCH YOU HAD.

4 Set how much you had (grams is best) and tap **Log**.

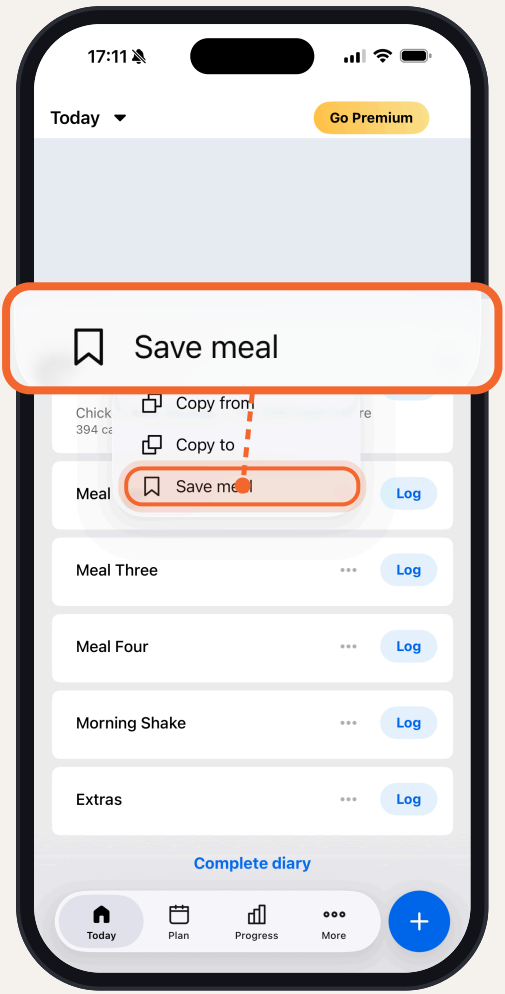

Got it wrong? Swipe left on the food in your diary to delete it. On Android, press and hold it.

SAVE TIME

SAVE A MEAL.

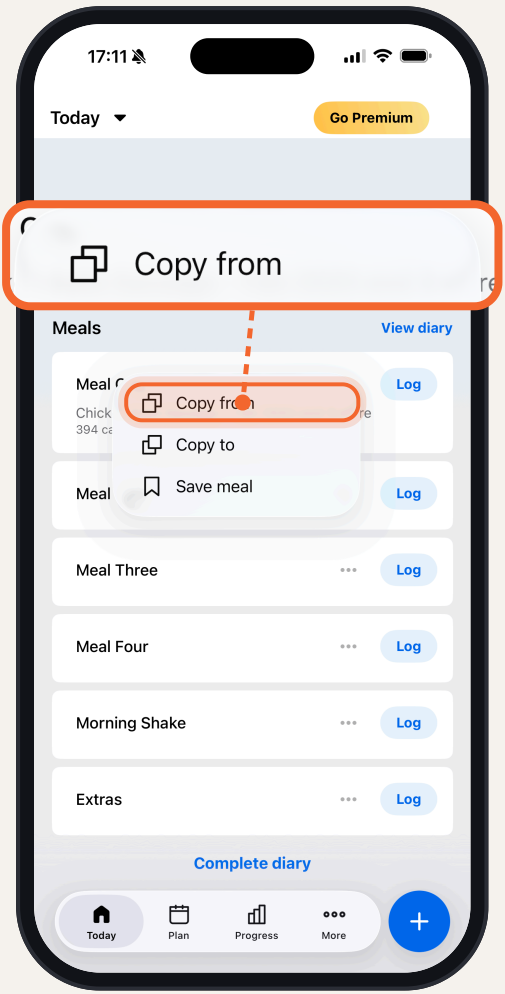

Have the same meal a lot? Tap the three dots next to it, then **Save meal**. Next time it's under **My Meals**.

SAVE TIME

COPY YESTERDAY.

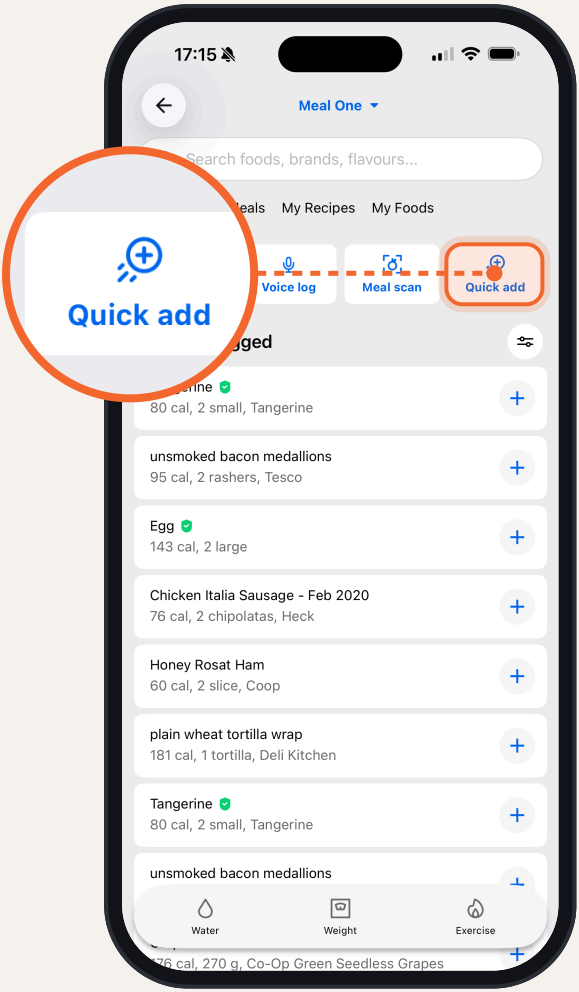

Same breakfast every day? Tap the three dots next to the meal and pick **Copy from**.

SAVE TIME

QUICK ADD.

Know the calories but can't find the food, like a meal out? On the Log food screen, tap **Quick add** and type the calories in.

RECIPES

YOUR OWN RECIPES.

Cooking for the family? Batch cooking for the week? Put the recipe in once and MyFitnessPal works out the calories in each portion.

WEIGH IT BEFORE YOU COOK IT

Weigh your ingredients raw, then add the full amount that goes in the pot.

COUNT THE PORTIONS

Tell it how many servings the whole pot makes. If it feeds four, that's 4 servings.

LOG ONE SERVING

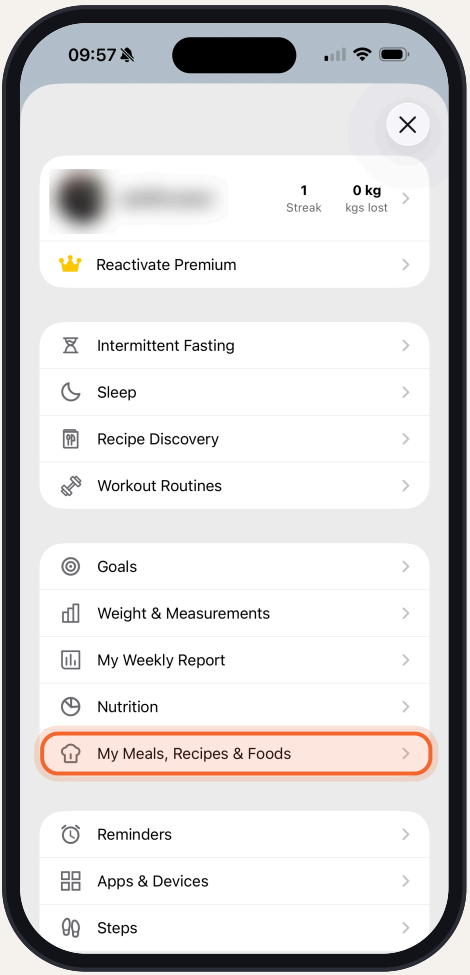

Next time you have it, your recipe is saved. Log one serving and you're done.

RECIPES

FIND YOUR RECIPES.

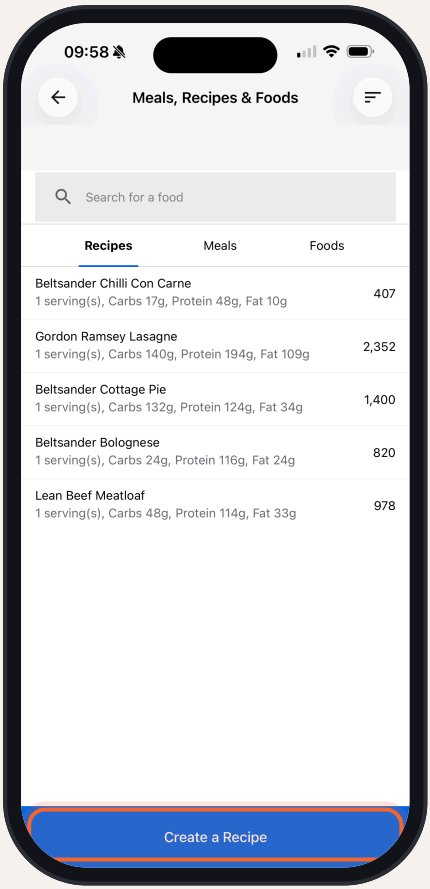

1 On Today, tap the **person icon** at the top right.

2 Tap **My Meals, Recipes & Foods**.

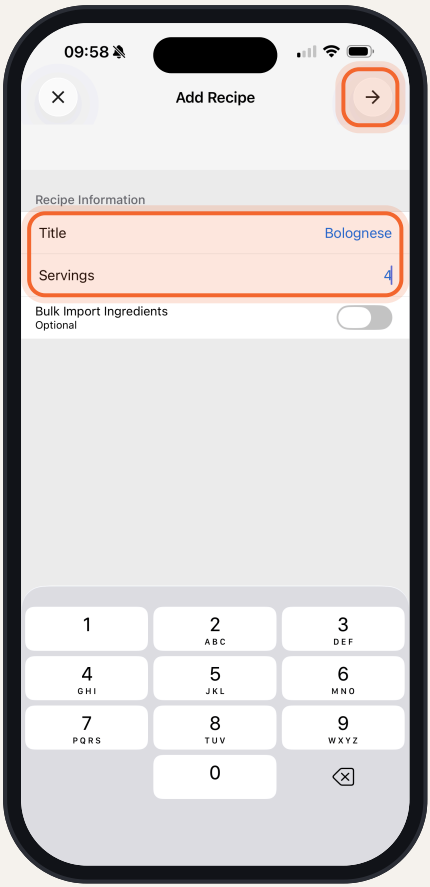

CREATE A RECIPE.

3 Tap **Create a Recipe** at the bottom of the screen.

NAME IT.

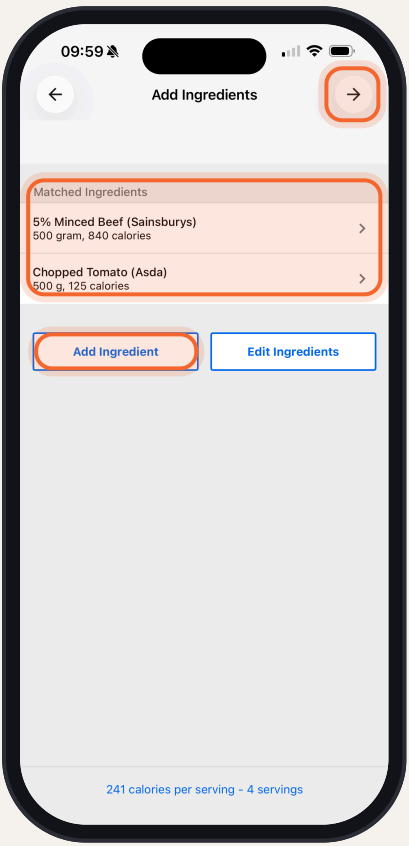

4 Give it a name, then type how many **servings** the whole recipe makes. Tap the **arrow** at the top right.

ADD YOUR INGREDIENTS.

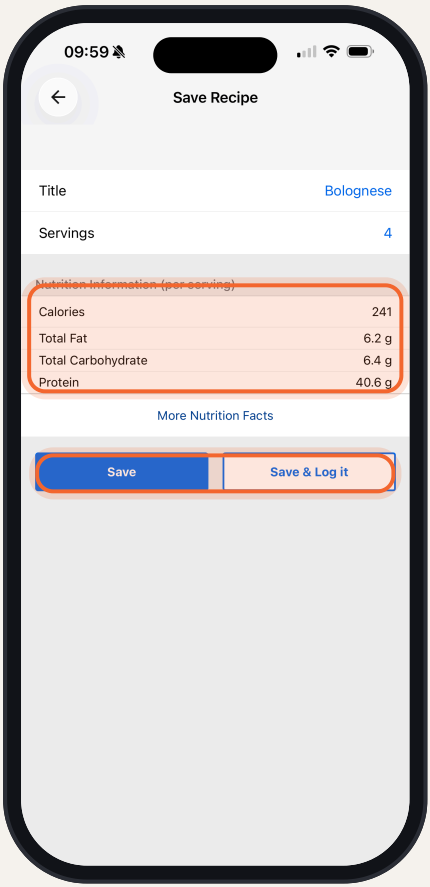

5 Tap **Add Ingredient** and search for each one, or scan the barcode. Add the full amount that goes in the pot.

6 When they're all in, tap the **arrow**.

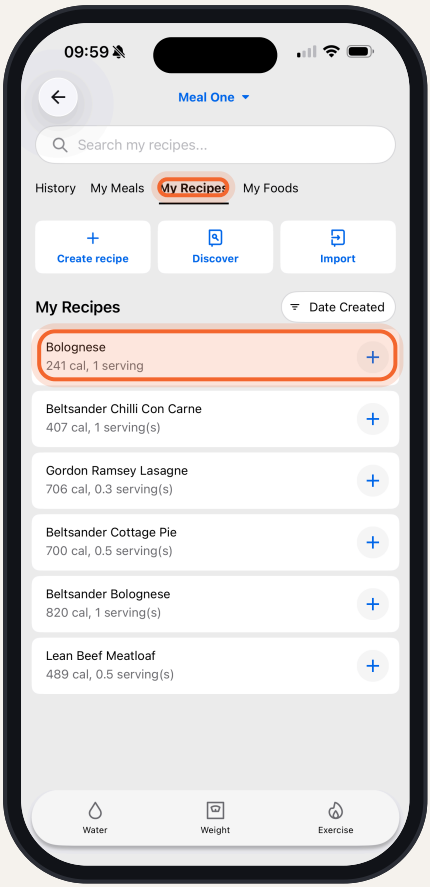

SAVE IT.

7 Check the numbers. They're for **one serving**. Tap **Save**, or **Save & Log it** if you're eating it now.

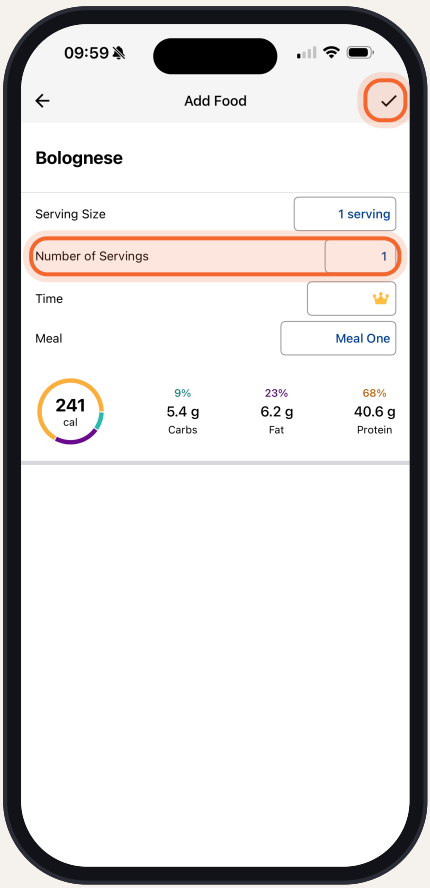

LOG YOUR RECIPE.

8 Next time, tap **Log food** next to the meal. Go to **My Recipes** and tap the **+** next to your recipe.

HOW MUCH YOU HAD.

9 To change the amount, tap the recipe name and set the **Number of Servings**. Then tap the **tick**.

RECIPE TIPS.

COUNT EVERYTHING

Oil, butter, sauces and cheese all go in. They're easy to forget and they add up fast.

DISH IT UP EVENLY

Servings only work if the portions match. Had a bigger plate? Log 1.5 servings. Had a smaller one? Log 0.5.

BOX UP THE REST

Freezing some for later? Same recipe, same log. One serving is one serving.

TELL YOUR COACH

Send them your family favourites. They can help you make them fit your targets.

GET IT RIGHT

LOGGING TIPS.

RECENT FOODS

When you tap Log food, the things you've had before show up first. Tap one and you're done.

RAW OR COOKED?

Food changes weight when you cook it. Weigh it raw and pick the raw entry if you can. Make the entry match how you weighed it.

CHECK IT AGAINST THE PACKET

Entries are added by users and some are wrong. If the numbers look odd, compare them with the label.

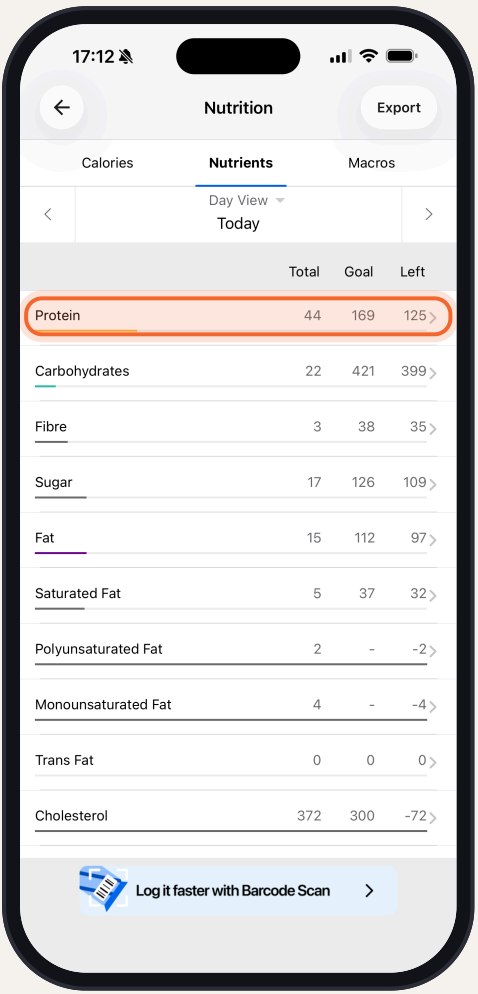

EATING OUT

Search the restaurant. Lots of chains are in there. If not, log each part of the meal and make your best guess.

GET IT RIGHT

CHECK YOUR PROTEIN.

Tap **More**, then **Nutrition**, then **Nutrients**, to see how much protein you've had today.

THAT'S IT

YOU'RE READY.

Log as you go. Log the bad days too.

Apps update and buttons move. If something in this guide isn't where we've said, message your coach on Trainerize and we'll sort you out.
